Realistic sensor noise is harmless when the ISP's noise reduction is tuned; un-tuned noise reduction is not

(a) What the policy sees: high sensor gain (λ = 0.012) through Infinite-ISP

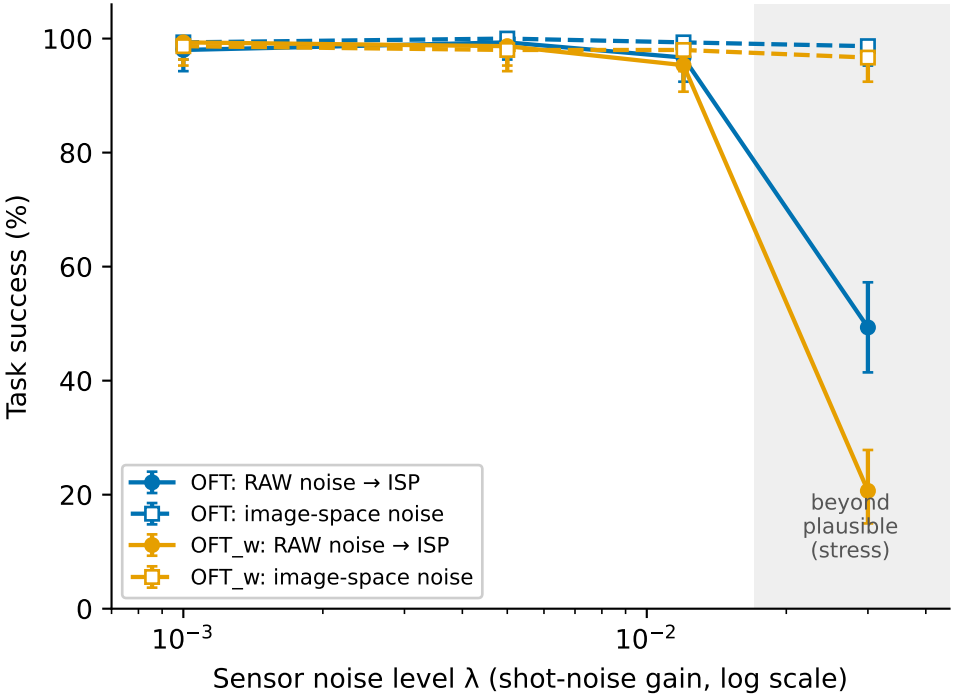

(b) Closed-loop success vs. ISP noise reduction (NR)

9 LIBERO tasks × 20 episodes (diamonds: × 30, new init states); 95% Wilson CIs.
NR off is compared with a clean camera without sharpening (OFT 99, OFT_w 97).

(c) Same PSNR, different outcome: RAW vs. image-space noise

Toy ISP with tuned NR; 3 tasks × 50 episodes; 95% Wilson CIs
